SUMMARY

IT Engineer with over 9 years of experience, specializing in Linux, CI/CD, monitoring, automation. My background spans from large enterprise projects (MegaFon) to international media studios (Sony, Disney, Dwarf, etc.).

KEY EXPERIENCE

ICVR Interactive

Jul 2024 - present

DevOps Engineer

Support of internal infrastructure and client production environments, including Sony Pictures and Disney. Focus on automation, Infrastructure as Code, and reliable CI/CD delivery.

CI/CD & Automation:

- Maintenance of GitLab CI pipelines: container builds (Docker -> Nexus / GitLab Registry), application deployments, and business-driven pipeline development.
- Implemented complex delivery workflows, including ERPNext deployment into Sony's isolated environment via GitLab <-> GitHub sync -> AWS Systems Manager Runbooks (with AWS Secrets Manager) -> Ansible.

Infrastructure as Code:

- Developed and maintained Ansible roles for Helix Perforce clustered deployments (Master / Edge / Standby).
- Automated infrastructure for VFX environments: Thinkbox Deadline render farms and license servers (Autodesk NLM, Foundry FLU, RLM, PFBucket) on RHEL/Debian.
- Managed cloud and on-prem infrastructure (AWS EC2, Proxmox) using Terraform.
- Introduced Grafana as Code: automated provisioning of dashboards, alerts, and data sources via Ansible.
- Implemented Chocolatey for Business to manage Windows machines; built CI pipelines for packaging and internalizing VFX/DCC software, including Unreal Engine, into a private Nexus.

DevSecOps & Observability:

- Managed HashiCorp Vault with CI/CD using Terraform roles and policies.
- Upgraded self-hosted GitLab across 8 major versions (16.9 -> 17.6.1), migrating from legacy CI_JOB_JWT to OIDC id_tokens.
- Deployed GoPhish infrastructure for security awareness campaigns.
- Built custom Prometheus exporters (to get metrics from Bareos, for example) and implemented Blackbox Exporter for endpoint monitoring.
- Provided Perforce platform support and handled incidents and requests while meeting SLA targets.

Nexign

Sep 2021 - Jul 2024

Senior Systems Engineer

Managed the Release Staging platform for MegaFon, a leading telecom operator. Focused on accelerating test environment provisioning, ensuring high availability, minimizing deployment risks, and driving FinOps initiatives.

Operations & CI/CD:

- Orchestrated product deployment to test environments using TeamCity, Bitbucket, and a custom Ansible framework.
- Ensured release quality readiness through Quality Gate coordination and environment management.
- Optimized environment provisioning by identifying performance bottlenecks (e.g., steal time, resource contention) through proactive monitoring.
- Reduced operational costs (FinOps) by identifying idle resources and optimizing service resource consumption.

Kubernetes & Support:

- Performed troubleshooting for applications in Kubernetes clusters (logs, pods, manifests) and resolved incidents in Kafka, RabbitMQ, and PostgreSQL.
- Managed Keycloak administration: configured client roles and resolved authentication challenges for microservices.

Monitoring & Automation:

- Built automation scripts in Python to collect custom metrics from TeamCity, Jira, and OpenStack APIs for visualization in Grafana.
- Maintained and enhanced shared Ansible roles used across the company's entire product deployment lifecycle.

Nexign

Sep 2020 - Sep 2021

Operations Support Engineer

Focused on automating monitoring systems and product deployment workflows within the MegaFon test environment.

Monitoring & Automation:

- Developed an automated metric collection system (Python, psutil, ETCD) that dynamically populated Grafana dashboards with new products, eliminating the need for manual configuration.
- Built a version tracking tool to detect discrepancies between Stage and Production, enabling data retrieval from the client's isolated network (MegaFon).
- Implemented a system to aggregate key health checks into a unified status indicator, enabling rapid assessment of test environment readiness.

Infrastructure & Deployment:

- Deployed and configured products in Staging environments using an Ansible-based framework.
- Facilitated integration testing cycles and resolved complex issues related to cross-service interactions.

Nexign

Apr 2018 - Sep 2020

QA Infrastructure Engineer

Maintained smoke test suites, resolving dozens of critical tests with Python and Robot Framework.

Provided system administration and monitoring support, ensuring reliable and efficient testing environments.

CoreGears

Dec 2017 - Mar 2018

Systems Support Engineer

Resolved client issues within a SaaS VoIP environment on OpenSUSE and Sippy Softswitch platforms, handling system configuration, diagnostics, and resolution, as well as monitoring system health using Zabbix.

Timeweb

Feb 2017 - Dec 2017

Technical Support Specialist

Retained numerous clients for the company by attentively addressing complex situations and consistently achieving strong KPIs, processing over a hundred tickets daily on diverse issues such as 4xx/5xx errors, network glitches, database management, DNS records administration, website migration and configuration, and resolving abuse cases.

EDUCATION

- | | | |
|------|---|---|
| 2013 | Master's Degree (<i>Photonics and Optical Information Technologies</i>) | ITMO University, Saint Petersburg |
| 2011 | Master's Degree (<i>Photonics and Optoinformatics</i>) | Volga State University of Telecommunications and Informatics, Samara |

SKILLS

Linux, Python, Git, Bash, Ansible, Jenkins, PostgreSQL, Kubernetes, CI/CD, Prometheus, DevOps, Nginx, Grafana, InfluxDB, VictoriaMetrics, Perforce, Terraform, Kafka, Docker, Zabbix, Amazon Web Services, Golang, Proxmox, Thinkbox Deadline, GitLab, Puppet, Nexus, TeamCity
